

## **Boyle Consulting Engineers Releases InSiteful Imagery® Mobile “Geospatial Analytics for the Site Assessor”**

**November 25, 2014**

Charlotte, North Carolina –Combining the strengths of small-format digital aerial photography with GIS analytical functionality, InSiteful Imagery® Mobile provides both project managers in the office, and site assessors in the field, unprecedented on-line access to custom-collected aerial imagery and software for asset condition inspection, analysis, and reporting.

Professionals in bridge inspection, precision agriculture, natural resources management, and construction are using this service because it provides extremely efficient data collection to assist them in their work. Users simply order the aerial imagery at the website and within days are provided log in credentials to the site to see, analyze, document, and report findings for their project site. The service is provided as a low-cost monthly subscription by project site with the flexibility for many users who can be authorized access.

Established in 1995, Boyle Consulting Engineers strives to be the first and best choice by air or on land for comprehensive geotechnical, geo-environmental, and geospatial services / site monitoring services in the Carolinas. BOYLE’s mission is to bring real-world, bottom-line value to each project it touches through uncovering unearthly mistakes or oversights that can cost time, money and profits. # # #
